

Shafi Chowdhury

Principal Statistical programmer / Managing Director

Summary

Friendly and engaging team player who can inspire teams to perform their best and resolve issues. Detail oriented, very experienced programmer, always looking deeper into the data, and trying to maximise efficiency and quality by finding the appropriate solution for each problem. A multi-tasker with a track record of delivering projects on time with solutions that continue to save clients time and resource in future projects, leaving happy clients every time.

Key Competencies

Worked in many different therapeutic areas
Experienced with CDISC and legacy data
Develop complex macros for different tasks
Calm and reassuring under pressure
Review and improve process for clients
Building and developing efficient global teams

Work Experience

Apr 2001 – Present **Principal Statistical Programmer /Managing Director, Shafi Consultancy, UK**

- Shafi Consultancy (Apr 2001 – Present)
  - Currently generating NONMEM and CDISC datasets for multiple PK projects – **Bayer (2024-2026)**
  - Completed full SDTM and ADaM submission package from legacy data - **KaizenBiosciences (2025)**
  - Completed generating NONMEM PK/PD datasets for multiple PK projects - **Merck (2024)**
  - **Develop global clinical trial programming team and support different clients by reporting trials** (analysis datasets, CDISC datasets, TLFs, company macros, independent validation, training)
  - Supporting many Oncology, Cardiovascular, Respiratory and Immunology projects with CDISC and TLF generation
  - Developed many endpoints and TLF macros in COPD and Oncology projects for use across multiple studies by the client
  - Develop applications to autogenerate programs and reduce programming time by 40%
  - Develop Risk Based Monitoring application used in multiple mega trials with up to 1600 patients

- **Ephicacy** (Mar 2025 – Present)
  - As Head of Services in Europe, I speak to European clients, build relationships, provide input into proposals and ensure that we have an appropriate team in place to manage existing tasks and prepare for upcoming tasks.
  - Ensure that our team is trained and upskill as required to help develop team leaders for the future

- **AstraZeneca** (Sep 2019 – Dec 2023)
  - CDISC and TLF programming for Respiratory, Immunology and Cardiovascular studies
  - Training and supporting internal programmers with their tasks, including template programs
  - Developed macro for COMPEX endpoint in ASTHMA studies and used it to check vendor derivations
  - Developed macros to check dates, times and associations of files sent by vendors

- **Boehringer Ingelheim UK and Germany** (Apr 2001 – Jun 2015):
  - Reported trials in many different therapeutic areas and phases
  - Developed macros for diabetes and oncology, including RECIST criteria endpoints

- Supported the development of the programming group which did not exist previously
- Defined programming standards for internal and external to follow
- Trained internal Statisticians and Programmers in SAS and techniques to solve different problems
- Developed and tested company standard macros
- Support implementation of Risk-Based Monitoring on multiple mega trials

Feb 2000 – Mar 2001 Senior Data Analyst, GlaxoWellcome, UK

- Developed template programs for use by other programmers to perform complex tasks – efficiency
- Requested by other teams to support them based on my success in supporting large struggling trials

Sep 1995 – Feb 2000 Senior Statistical Programmer, Quintiles, UK

- Reported trials in many therapeutic areas and all trial phases
- Developed macros, template programs and provided training to internal and client teams
- Lead teams to deliver large projects with more than 10 trials in them, on time and within budget
- Worked on client site in Germany and in Holland

Jul 1995 – Sep 1995 SAS Programmer, Glaxo, UK.

- Developed consistency and validation check programs to review data sent by CROs to Data Management

Jul 1993 – Aug 1994 Trainee SAS Programmer, Glaxo, UK.

- As a placement student I wrote programs to generate graphs, statistical analysis and performed randomisations for new trials.

Education

M.Sc. Applied Statistics,	Sheffield Hallam University, UK,	1997 – 2000
BSc.(Hons.) Mathematics,	De-Montfort University, UK,	1991 – 1995

Presentations:

Phuse conference

- Will AI give me wings (2026)
- Traceability confirmation at your fingertips (2023)
- Streamlining the usage of SAS, R, Python into our process workflow (2022)
- How can we integrate new technology and maintain data integrity? (2022)
- Automation and Central Repository, Are we achieving our aim? (2021)
- Using data visualisation to communicate the story of the trial results (2018)
- Generating tables, listings and figures without any programs (2018)
- Making the leap from Excel to a Database used for Reporting (2016)
- Using Meta Data to drive standards, speed, consistency and quality in reporting (2016)
- The rocky road to Data Transparency (2015)
- Risk-Based Monitoring - Why Does it Matter to Programmers? (2013)
- Managing Data Issues Identified During Programming (2011)
- Generate ATTRIB and FORMAT Statements from the SAP (2010)

PSI conference

- Fraudulent data detection in clinical trial using dynamic clustering (2018)

PAGE Meeting

- Using 'Big' NONMEM Dataset Generated from Standard SDTM to Review Data and Accelerate Model Building Process (2017)
